SafetyBOSS

COMPANY OVERVIEW

PREVENT·DETECT·RESPOND

THE INDUSTRY LEADER IN SAFETY SERVICES

- **Experienced personnel**
- **Field proven equipment**
- **60 years of success and counting**

COMPANY OVERVIEW

Exceptional Equipment and Personnel

Since 1956 Safety Boss has provided comprehensive safety prevention, detection and response services for the Oil and Gas, Manufacturing and Construction Industries.

From the hundreds of emergencies we have responded to and the everyday projects we work on, our commitment has always been providing the highest quality of safety equipment and personnel to our customers. We fulfill this commitment by working towards our mutual goals with integrity, respect, trust, diligence and continuous improvement.

H2S Safety Services
- Personal and Standalone Gas Detection
- High Pressure Breathing Air Units
- H2S Safety Supervisors
- Air Quality Monitoring

Medical Services
- EMR / EMT / Paramedic Professionals
- MTC Units
- ETV Units
- Medical Trailers

Fire/Shower Protection and Response
- Combination Fire/Shower Units
- Dry Chemical Systems
- High Volume Pump Skids
- Compressed Air Foam(CAF) Trailers

Industrial Services
- ERP and Rescue Plan Design
- Confined Space Monitoring and Rescue
- High Angle Rescue
- Spark Watch
- General Construction Safety
- Plant Turnaround Safety Planning

Special Services
- Well Control and Blowout Recovery
- Freezing Services
- On and Off Shore Packages Available
- Worldwide Emergency Response

Rental Division
- SCBA/SABA
- Gas Detection
- Fire Suppression Systems
- Mobile and Standalone Medical Units
- High Pressure Breathing Systems

Training Services
- All Standard Oil and Gas Courses
- Customized Course Packaging
- All Training Available On or Off Site

Testing Services
- Facial Fit Testing
- Drug And Alcohol Testing
- Audio-Metric Testing

MOBILE AIR QUALITY MONITORING

PREVENT·DETECT·RESPOND

Remote Mobile Monitoring and Reporting

Upstream - Midstream - Downstream

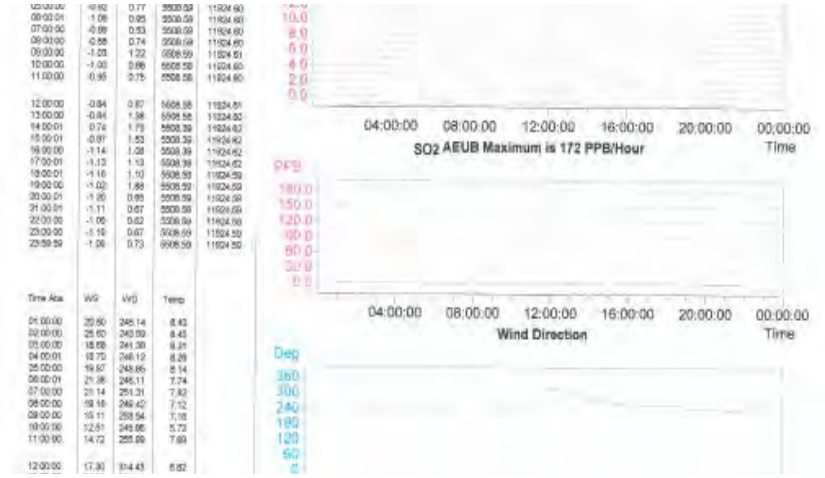

PREVENT·DETECT·RESPOND

MOBILE AIR QUALITY MONITORING

THE SAFETY BOSS MOBILE AQM UNIT IS YOUR INDUSTRY LEADING 1ST LINE DEFENSE SYSTEM IN THE DETECTION AND CONTROL OF HAZARDOUS GASSES.

PREVENT

- Emergency response planning
- EPZ monitoring
- Sensitive public relations management
- Alberta and British Columbia ambient air quality compliant

DETECT

- Parts per billion(ppb) H_2S and SO_2 detection
- GPS tagging system
- Wind speed and direction monitoring
- In vehicle computer reporting and data logging

RESPOND

- Emergency response trained operators
- Self contained 4 x 4 service vehicle
- 24 hour on call response from any of our locations

CAF FIRE SUPPRESSION SYSTEM

PREVENT·DETECT·RESPOND

Diversified Applications

- Drilling
- Fracturing/Hot Fueling
- Facilities
- Pipelines
- Crude Bulk Storage
- General Construction
- Mining
- Pulp and Paper
- Forestry/Wildland
- Hydro Electric

CAF FIRE SUPPRESSION SYSTEM

IS IGNITION A PROBLEM?

OUR CAF SYSTEM IS YOUR COST EFFECTIVE SOLUTION

Standard SPEC SHEET - May have additional options

CAF OUTPUT / DISCHARGE SYSTEM
- 2 x 20 GPM @ 100 PSI rated capacity
- 125 PSI max pressure
- 2 x 150' x 1" discharges
- 75' range
- 1600 Gal @ 8:1 expansion ratio
- 15 min. of suppression utilizing 1 hose
- 07 min. of suppression utilizing 2 hoses

FOAM REFILL SYSTEM
- Tank Mix @ 3% or 6%
- Compatible with A, B, and ABD

INCLUDES
- 2 x 30lb fire extinguishers
- 1 x 150lb fire extinguisher

GENERAL SPECIFICATIONS
- Heated 16'Trailer
- 200 PSI rated pressure
- 200 US Gallon 6% premix foam
- ASME certified
- 100' of power supply with intrinsically safe connections
- External indicator / alert for power or heat disconnect

PRESSURE SUPPLY SYSTEM
- 2 x N^2 cylinders or
- 2 x compressed air cylinders or
- Directly to an air trailer

Drug and Alcohol Testing Services by Safety Boss

Pre Employment Testing
Pre Access Testing
Post Accident Testing
Reasonable Suspicion Testing

PREVENT·DETECT·RESPOND

DRUG AND ALCOHOL TESTING SERVICES

Testing Programs for Work Place Safety.

With a fast turn-around-time of lab based testing, you can be assured accurate results–quick.

- 24 hours from sample receipt for a negative result and 48 to 72 hours for a non-negative screen or,
- Express (Point Of Care Testing)

Fully Qualified and Certified Technicians

- DATAC and DATIA certified
- Professional Medical Personnel
- Exceeding Industry standards

Alcovisor Mercury

- NHTSA Approved Evidential Breath Alcohol Testing Device (EBT)
- Complete breath test in under 30 seconds
- Professional, accurate, and reliable
- Compact and mobile

Options **Additional Panels May Be Added**

Point Of Care Testing (Urine 7 panel)

- Mobile
- Results within minutes.
- All positive tests are sent to the laboratory and reviewed by a Medical Review Officer for confirmation.

Lab Test (Urine 7 panel DOT and Non-DOT)

- Collected and then sent for testing in a SAMHSA and DOT certified laboratory
- Medical Review Officer Services
- Negative results will be returned within 24 hours from receipt
- Non-negative results within 48-72 hours of receipt.

Alcohol Testing- (DOT approved)

- Legally defensible
- Breath Alcohol Concentration (BAC) is tested immediately
- No lab time required - mobile, immediate screening

Gas Detection Equipment Rentals & Maintenance

- 4 Head H2S/LEL/O2/CO Gas Detectors
- 4 Head H2S/LEL/O2/CO Gas Detectors with Sample Pumps
- 5 Head H2S/LEL/O2/CO/SO2 Gas Detectors with Sample pumps
- Single Head H2S Gas Detectors
- Stand-Alone H2S/SO2 PPB Air Monitors
- Stand-Alone H2S/LEL PPM Air Monitors
- Mesh Guard H2S/LEL Systems
- Benzene Monitors
- V-Ray O2/LEL by Volume Monitors
- Mobile Air Quality Monitoring Truck (AQM)

These tandem wheeled trailers offer protection through an eight cylinder cascade system. End units are completely transportable to remote locations and include the following equipment inventory:

- Eight 4500 psi, 440 cu. ft. Breathing Air Cylinders
- Two SCBA (4500 psi, 45 Minute Auto Positive Pressure)
- Six Supplied Air Breathing Apparatus (SABA)
- H2S Gas Detector, "Rae" Pump Style, with 90 Colorimetric Tubes
- 800 ft. Raised-Letter Breathing Air Hose
- Re-Charge Line for Refilling Breathing Apparatus
- Hose Line Masks with Egress Cylinders
- Three Manifolds (Low Pressure)
- Two High Pressure Regulators
- Folding Stretcher and First Aid Kit
- H2S Warning Sign, Three Flags and Poles and Wind Sock
- Flare Pistol Kit with Twelve Flares
- Two Briefing Area Tents
- Hook Hose Hanger Complete with Tripod
- Two Hook Rail Hose Hangers

PERSONNEL

We provide dedicated and Highly-Trained Safety Personnel to meet or exceed Industry Standards. Our Personnel complete additional In-House Training that can also be customized to meet your specific needs.

- NCSO/CSO's
- Firefighters
- Well Control Specialists
- Plant Shutdown Planners & Coordinators
- Safety Supervisors
- Confined Space Entry Watch [Confined Space Technicians]
- Spark Watch
- Security
- EPZ Rovers
- High Angle Rescue Technicians
- Quantitative and Qualitative Fit Test Technicians
- Fire Fighters
- Safety Course Trainers
- EMT's, EMR's, OFA III & Advanced First Aid
- Paramedics

Our Medical Units and Personnel are always prepared to handle any situation that may arise on the job site. We have highly trained Medical Professionals including EMRs (Emergency Medical Responders), EMTs (Emergency Medical Technicians), RNs (Registered Nurses), Paramedics, and OFA IIIs (Occupational First Aid Attendants) both restricted and unrestricted to meet Medical Aid Requirements for Alberta, B.C., Saskatchewan and N.W.T.

Workers in hazardous occupations in remote areas face multiple dangers on the worksite and need prompt medical attention when an incident occurs. Minutes and hours after a serious injury are very critical and may determine the difference between life and death of an employee. Our Industrial Medic Division provides a cost-effective solution to quality emergency care.

All units are kept clean and sanitized with adequate lighting, ventilation, and heating to provide our patients with a comfortable environment while being treated. All Incidents/Accidents are recorded in a Safety Log and are kept as confidential documents.

MOBILE TREATMENT CENTRE

- Capable of transporting and treating two injured Patients
- Treatment chair for minor injuries and walking patients
- Dressing Station Equipment
- Stretchers and Spine Boards
- Oxygen Therapy with extra cylinders and Airway Kits
- Blankets, Trauma Kits, Spinal Immobilization Kits, Splints
- Hot and Cold sink for wound care
- Two Heaters for extreme winter conditions
- Radio/Cell Phone Communication
- Fire-extinguisher (5 lb)
- AED (Auto External Defibrillator)
- ALS Kits for Paramedics
- EMTA Kits for EMTs

SAFETY EQUIPMENT RENTALS

Along with the entire line of specialized and hand-picked equipment and fleet that Safety Boss offers for the unique needs of the Canadian Oil and Gas Industry, these Rentals are also available.

- CSE Kits
- Gas Detection Monitors
- Fire Extinguishers
- SABA's
- SCBA's
- High-Angle Kits
- Tripods and Winches
- Self Retracting Lifelines
- Wheeled Fire Extinguishers
- Skid Pumps

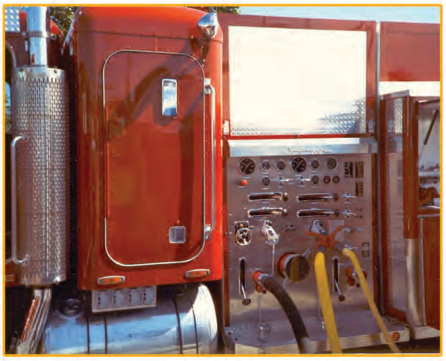

THE RIGHT FIRE TRUCK FOR THE JOB

As Frac Operations get bigger, so does the demand for Firefighting Equipment and Personnel. Frac Equipment has already been lost on several smaller Frac Operations due to inadequate supply and delivery of Fire-Fighting Foam and Water. Multi-Truck Fire Systems do not mean better Fire Knockdown rates. Smokey Fire Trucks are the only Custom Fire Trucks specifically designed for the largest possible demands in the Oil and Gas Industry. One Smokey Fire Truck is adequate for the largest Frac Operation with a minimum of 400 bbl (48 kL) of On-Site Water as well as additional Firefighters depending on the Operation.

Call us for a quote to ensure that you have the right Fire-Fighting Capability On-Site to protect your Investment as well as your Crew's Safety.

FAQ's - What makes Smokey Fire Trucks Different?

Are Smokey Fire Trucks UL Rated? Yes, a plate is mounted on every Smokey Fire Truck with these ratings. The Underwriters Laboratories Rating is a third-party rating ensuring our Fire Trucks do what we say they can do.

Why is the Pump Rate so Important? All NFPA (National Fire Protection Association) specifications are based on the Pump Rate versus the area to be covered. Simply put the higher the Pump Rate the larger the area that can be covered. Smokey Fire Trucks have the largest Fire Pump available. They're all UL Performance Rated at 3500 GPM (13 m3/min) from a 10 foot draft, however being a Centrifugal Type Pump as the suction pressure increases so does the discharge rate. For example taking suction from a Hydrant-Type System this same Fire Truck will deliver discharge rates over 5000 GPM (19 m3/min). The obvious benefit is that the Smokey Fire Trucks are capable of covering much larger areas than Competitors' Trucks, some of which are rated as low as 500 GPM (1.9 m3/min) and none have the Larger Pumps.

What type of Foam Injection System is Used? The Smokey Fire Trucks use a Balanced Pressure System that allows for an accurate Foam consistency regardless of changes in rates or pressures. The more common Foam System is an Around The Pump Proportioner (ATP). The problem with this system is its dependency on a vacuum created in the suction side of the pump. Consequently as the suction pressure varies with rates and discharge pressures so does the Foam induction cut in and out. With a pressurized suction set up, the ATP system usually doesn't work at all because the suction side won't go into a vacuum. The ATP Foam system is also an on or off system so the Total Output is Foam or No Foam. The Balanced Pressure system allows for foaming any outlet stream. For example the Firefighters may want a straight water stream for cooling in one area and another Foamed stream for a Fire Knock Down.

What type of Foam is used? Safety Boss uses FireAde®2000 which has six times the Fire Knockdown Rate of UL162 while using 1/6 of the volume. FireAde® 2000 also encapsulates the Hydrocarbon molecules thereby greatly reducing the likelihood of re-ignition. Last but not least, FireAde® 2000 is Biodegradable and Environmentally Safe.

What is the Coverage Range of the Water/Foam Stream? From any single point, the Coverage Range is 100 metres which is enough for the largest Frac Operations.

What type of Shower System is on board the Smokey Fire Trucks? Are they ANSI/OHSA/WCB compliant? Three independent Decontamination/Shower stations complete with shower-head, eye-wash basin and deluge hose are included. The whole system is fully compliant with ANSI/OHSA/WCB specifics. Also, each unit is capable of full containment of contaminated fluids.

SafetyBOSS

SMOKEY FIRE TRUCKS

SPEC SHEET

The "Smokey" Series Units are designed to address the unique problems encountered in large-scale Hydrocarbon Firefighting. With over five decades of global experience, SafetyBOSS has emerged as the leader in designing better firefighting systems for use in the specialized field of Hydrocarbon Fire Control. Each "Smokey" Unit, operated by two highly trained Firefighters, has the ability to control 66,000 square feet of area. With the support of standard water trucks, "Smokey" Units can firefight at higher rates than other units in the field today. Each Unit is Emergency Response Registered and Safety Certified.

-Combination Fire Truck/Decontamination (Shower) Unit
-C15 Acert 550 hp
-3000 GPM Hale "A" & "B" Centrifugal Direct Foam Injection System
-1100 Gallons heated potable water
-Potable Deluge Master Stream Monitor
-325 Gallon FireAde 2000 Concetrate
-500 lb. Purple "K" Dry Chemical Vessel
-4-30 lb. Purple "K" Dry Chemical Extinguishers
-3 man Decontamination Module with Grey Water Recovery including 3 showerheads, eye-wash stations and drench hoses
-2 Fire Service Self-Contained Breathing Appartus
-Medical Aid Kit and Water Gel Fire Blanket
-Industrial Burn Kit
-Separate Patient Recovery Bunk
-Complete Inventory of Fire-Fighting Equipment
-Two (or Three depending on Pre-Planning) Firefighters
-All SafetyBOSS Combination Units exceed ANSI specifications including a secondary Shower Pump

Shower & Decontamination Units

1,000 GALLON DECONTAMINATION UNIT

As our name would suggest, Safety is always our primary concern. SafetyBOSS provides Shower Decontamination Units for use in acid stimulation and hazardous material recovery situations.

All Decontamination Units have the ability to recover the gray water thereby decreasing the hazardous effects on the environment. The Unit is designed according to strict A.N.S.I. Standards. Its features include:

- Emergency Response Registered
- Emergency Response Control Centre
- 1000 Gallons of On-Board Potable Water
- Ability to Recover Gray Water
- 3 Drench Shower/Eye Wash/Mid-Body Drench Hoses
- 2 Independent Hydraulic Dirve 102 GPM Centrifugal Pumps

ON BOARD EQUIPMENT

The SafetyBOSS Decontamination Unit is fully equipped with First-Aid Equipment stored in a temperature controlled unit.

- Recovery Bunk
- Albert First Aid Kit
- By-Fold Stretcher
- 4500 psi, 45 minute Auto Positive Pressure SCBA
- 30 lb. Purple K Fire Extinguishers
- Uvex Acid Splash Goggles
- Wide Brim Face Shields
- Neoprene Slickers
- Deluxe Trauma Kit (optional)
- Fire Blanket (optional)

WELL CONTROL

BLOWOUT CONTROL

Safety Boss' expertise in Blowout Control is legendary. Honed over five decades of work in Canada and around the world, the Company's Blowout Control skills continue to be unmatched as we employ the best technology, equipment and personnel to safety meet the demands of each Emergency.

We provide the Oil and Gas Industry with emergency response services for Production Facility and Fire Protection during high hazard operations. The company is also experienced in working in Hydrogen Sulfide Environments.

No one is more concerned about safety than Safety Boss. Our team of seasoned professionals know the dangers of their assignment and approach their work in a calm and disciplined manner. That's why Safety Boss is trusted around the world.

FIREFIGHTING

Safety Boss specializes in providing a wide range of firefighting services. The company's core expertise is in controlling large hydrocarbon fires. Safety Boss' experience includes the successfully control of hundreds of oil well fires and blowouts, pipeline ruptures and processing facility fires.

The Safety Boss team has extensive training acquired through specialized firefighting schools and refresher courses taken to maintain the highest level of safety and team efficiency.

EQUIPMENT

Safety Boss has the largest fleet of blowout equipment in Canada. The "Smokey" series units are designed to address the unique problems encountered in large scale hydrocarbon firefighting. With over five decades of global experience, Safety Boss has emerged as the leader in designing better firefighting systems for use in the specialized field of hydrocarbon fire control.

Each "Smokey" unit, operated by two highly trained firefighters, has the ability to control 66,000 square feet of area. With the support of standard water trucks, a "Smokey" unit can firefight at higher rates than other units in the field today. Each unit is Emergency Response Registered and Safety Certified.
